

GEN AI MASTERMIND WORKBOOK

Building Websites Without Writing Code

Create stunning portfolio websites & landing pages
using AI — no coding experience required

Emergent.sh

app.emergent.sh/register?ref=MASTERMINDS

TASK 1

Build a Personal Portfolio Website For Yourself

OBJECTIVE

Create a professional portfolio website that showcases your skills, experience, and projects using AI — without writing a single line of code.

STEP-BY-STEP INSTRUCTIONS**1 Prepare Your Resume or LinkedIn Profile**

Option A: Open your resume (Word doc, PDF, or any format) and copy all the text content.

Option B: Download your LinkedIn profile as a PDF. Go to your LinkedIn profile → Click "More" → Select "Save to PDF". This gives you a ready-made summary of your experience.

2 Generate Website Copy Using Any Free LLM

Go to ChatGPT (chat.openai.com) or Claude (claude.ai) — both have free plans. Upload your resume PDF or paste your resume text, then use the prompt on the next page to generate polished website copy.

3 Sign Up on Emergent

Open your browser and go to:

<https://app.emergent.sh/register?ref=MASTERMINDS>

Click "Sign Up" and complete your registration.

4 Use This Prompt in ChatGPT or Claude

Paste your resume content along with this prompt into the LLM:

LLM PROMPT

I want to create a professional portfolio website.
Here is my resume content: [PASTE RESUME / UPLOAD PDF]

Please write polished website copy for me that includes:

1. A compelling hero section headline + professional tagline (2-3 sentences about who I am)
2. An 'About Me' section (2-3 paragraphs telling my professional story)
3. A 'Skills' section listing my key competencies grouped by category
4. An 'Experience' section with my work history (company, role, key achievements)
5. A 'Projects' section (describe 3-4 key projects or achievements with short descriptions)
6. A 'Contact' section with a professional call to action

Write in first person. Make it engaging, professional, and highlight my unique value proposition.
Format the output clearly with section headers.

Copy the generated website copy — you will paste it into Emergent next.

5 Build Your Website in Emergent

Once logged into Emergent, start a new project. Paste the website copy from Step 4 along with the Emergent prompt on the next page.

USE THIS PROMPT IN EMERGENT (PASTE YOUR COPY ABOVE IT)

EMERGENT PROMPT

Build me a modern, professional portfolio website using the content below. Make it:

- Modern and clean with a professional color scheme
- Fully mobile responsive
- Easy to navigate with smooth scrolling
- Include subtle animations and hover effects
- A sticky navigation bar at the top
- A compelling hero section with my name and tagline
- Clean sections for About, Skills, Experience, Projects, and Contact
- A professional footer with social media links
- Use a cohesive design language throughout

Here is my website copy:

[PASTE THE COPY FROM CHATGPT/CLAUDE HERE]

6 Review and Refine

Check the generated website. Use follow-up prompts to tweak it:

"Make the color scheme more blue/professional"

"Add a testimonials section"

"Make the hero section more eye-catching"

"Change the font to something more modern"

7 Test Your Website

Preview the website on different screen sizes. Check all links and functionality. Make final adjustments until you're happy with it.

8 Share Your Creation!

Take screenshots of your portfolio and share it on LinkedIn.

TASK 2

Build a Business Landing Page For Your Brand

OBJECTIVE

Create a professional landing page for your business, product, or side project using AI. This page will help you attract customers, showcase your offering, and establish credibility — all without touching code.

STEP-BY-STEP INSTRUCTIONS**1 Gather Your Business Information**

Before you start, prepare the following details about your business:

- Business name and one-liner description
- The problem you solve for customers
- Your key product/service features (3-5)
- Any testimonials or social proof you have
- Your call-to-action (book a call, sign up, buy now, etc.)
- Contact information or social media links

2 Generate Landing Page Copy Using an LLM

Go to ChatGPT or Claude (free plans work great). Use the prompt on the next page to generate your landing page content.

3 Open Emergent

Log into your Emergent account (or sign up if you haven't yet):

<https://app.emergent.sh/register?ref=MASTERMINDS>

4

Use This Prompt in ChatGPT or Claude

Paste your business details along with this prompt:

LLM PROMPT

I want to create a landing page for my business.
Here are my business details: [PASTE DETAILS]

Please write compelling landing page copy including:

1. A powerful hero headline + subheadline that communicates my value proposition in seconds
2. A 'Problem' section describing the pain point my customers face
3. A 'Solution' section showing how my product/service solves it
4. A 'Features' section with 3-5 key benefits (with short descriptions for each)
5. A 'Social Proof' section (testimonials, stats, or trust badges)
6. A 'Pricing' or 'How It Works' section
7. A strong CTA section with urgency
8. An FAQ section with 4-5 common questions

Write in a persuasive, benefit-driven tone.
Format clearly with section headers.

Copy the generated copy — you will paste it into Emergent next.

5

Build Your Landing Page in Emergent

Start a new project in Emergent. Paste the copy from Step 4 along with the Emergent prompt on the next page.

USE THIS PROMPT IN EMERGENT (PASTE YOUR COPY ABOVE IT)

EMERGENT PROMPT

Build me a high-converting business landing page using the content below. Make it:

- Modern, bold, and conversion-focused
- Fully mobile responsive
- A sticky header with CTA button
- A hero section with a clear headline and CTA button
- Visual feature cards with icons
- A testimonials/social proof section
- Pricing or 'How It Works' section
- A strong final CTA section
- Professional footer with links
- Smooth scroll animations
- Cohesive color scheme that matches my brand

Here is my landing page copy:

[PASTE THE COPY FROM CHATGPT/CLAUDE HERE]

6

Review and Refine

Check the generated landing page. Use follow-up prompts:

"Make the CTA buttons larger and more prominent"

"Add a countdown timer to the hero section"

"Change the color scheme to match my brand"

"Add more whitespace between sections"

7

Test Your Landing Page

Preview on mobile and desktop. Test all buttons and links. Ask a friend or colleague for feedback before publishing.

8

Share Your Creation!

Post your landing page on LinkedIn and tag us!

Tag #Outskill & #Emergent

We will reshare the best submissions!

LEVEL UP

Pro Tips for Better Results

● Be Specific in Your Prompts

Mention exact colors, styles, layouts, and references you want. The more detail you give the AI, the closer it gets to your vision on the first try.

● Iterate in Small Steps

Refine one section at a time rather than changing everything at once. Focus your follow-up prompts on specific elements.

● Test on Mobile

Always preview your site on different screen sizes. Over 60% of web traffic is mobile — your site must look great on phones.

● Add Personal Touches

Customize the AI output with your own images, brand colors, and unique copy. AI gives you the structure; you add the soul.

● Keep It Simple

A clean, fast-loading website beats a complex, slow one every time. Prioritize clarity and speed over flashy effects.

● Use the Two-Step Workflow

LLM for copy + Emergent for design is your power combo. Let each tool do what it does best. Don't try to do everything in one tool.
